The following is an examiner's statement of reasons for allowance: Rubacha et al. disclose a stepwise (fig. 2) change in the gain of an amplifier 41 (fig. 3) but it is not disclosed that the gate voltage of a semiconductor switch is controlled to do so; the FETs of fig. 4 are used to select the input signal to be fed to the amplifier. Preves discloses controlling the gain of an amplifier 22 (fig. 1) by controlling the impedance of an FET 68 via its gate voltage, but this FET acts as a controlled resistor rather than a switch over the control range (fig. 2). Flora et al. discloses a ramp gate voltage (figs. 2C,2D) controlling the gates of FET switches 12,14 (fig. 1) between their on and off states; however, this does not control the gain of amplifier 28, only the signal fed to it. Galpin discloses (fig. 2) controlling the conductance of a bipolar transistor T via the stepwise control of its base voltage in order to control the gain of an amplifier G, but again the transistor acts as a variable impedance rather than a switch.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

The drawings filed 10-11-05 are acceptable.
